

OMNIRES

Y

The OMNIRE Y bathroom fittings collection is built around a timeless, perfectly crafted design, with beauty rooted in simplicity. Its minimalist aesthetic utilizes the highest quality materials to combine functionality with a durable yet stunning form. Remarkable design solutions, along with carefully selected materials, state-of-the-art technologies, and superior craftsmanship, all contribute to the enduring success of this collection.

The design is inspired by the shape of the circle – a symbol of harmony and perfection. The collection's minimalist character, which blends purity of form with elegance, provides limitless design options, allowing it to seamlessly integrate into various interiors and styles.

"The collection was born from my passion for Danish design, which emphasizes functionality and high-quality materials. In this approach, beauty is found in the simplicity of form, with each element meticulously considered and crafted with the utmost attention to detail".

Janusz Langner, OMNIRE Studio

Creating well-thought-out and inspiring interiors is made possible by the most advanced technology and an extensive product range, which includes traditional standing mixers, wall-mounted and concealed solutions, as well as complex systems with thermostatic mixers.

The 5-hole bath mixer was carefully designed to ensure its perfect symmetry and harmonious form. The precisely proportioned shape beautifully complements the bath, while the concealed installation method guarantees space efficiency. The design won the main prize at the Dobry Wzór competition.

High quality, A-grade brass guarantees exceptional durability and anticorrosive features. It is also characterised by precise structure and refined finish.

All mixers are equipped with superior quality ceramic or thermostatic cartridges that ensure smooth and precise water flow control whilst guaranteeing long-term product performance.

The **ECO WATER** technology minimises the environmental footprint by reducing water consumption (approx. 50%), without compromising on the overall product experience.

Thanks to the **AIR WATER** technology, the water across all products is soft and pleasant to the touch. The stream does not spray and it is quiet and steady, even in the event of variations in water pressure.

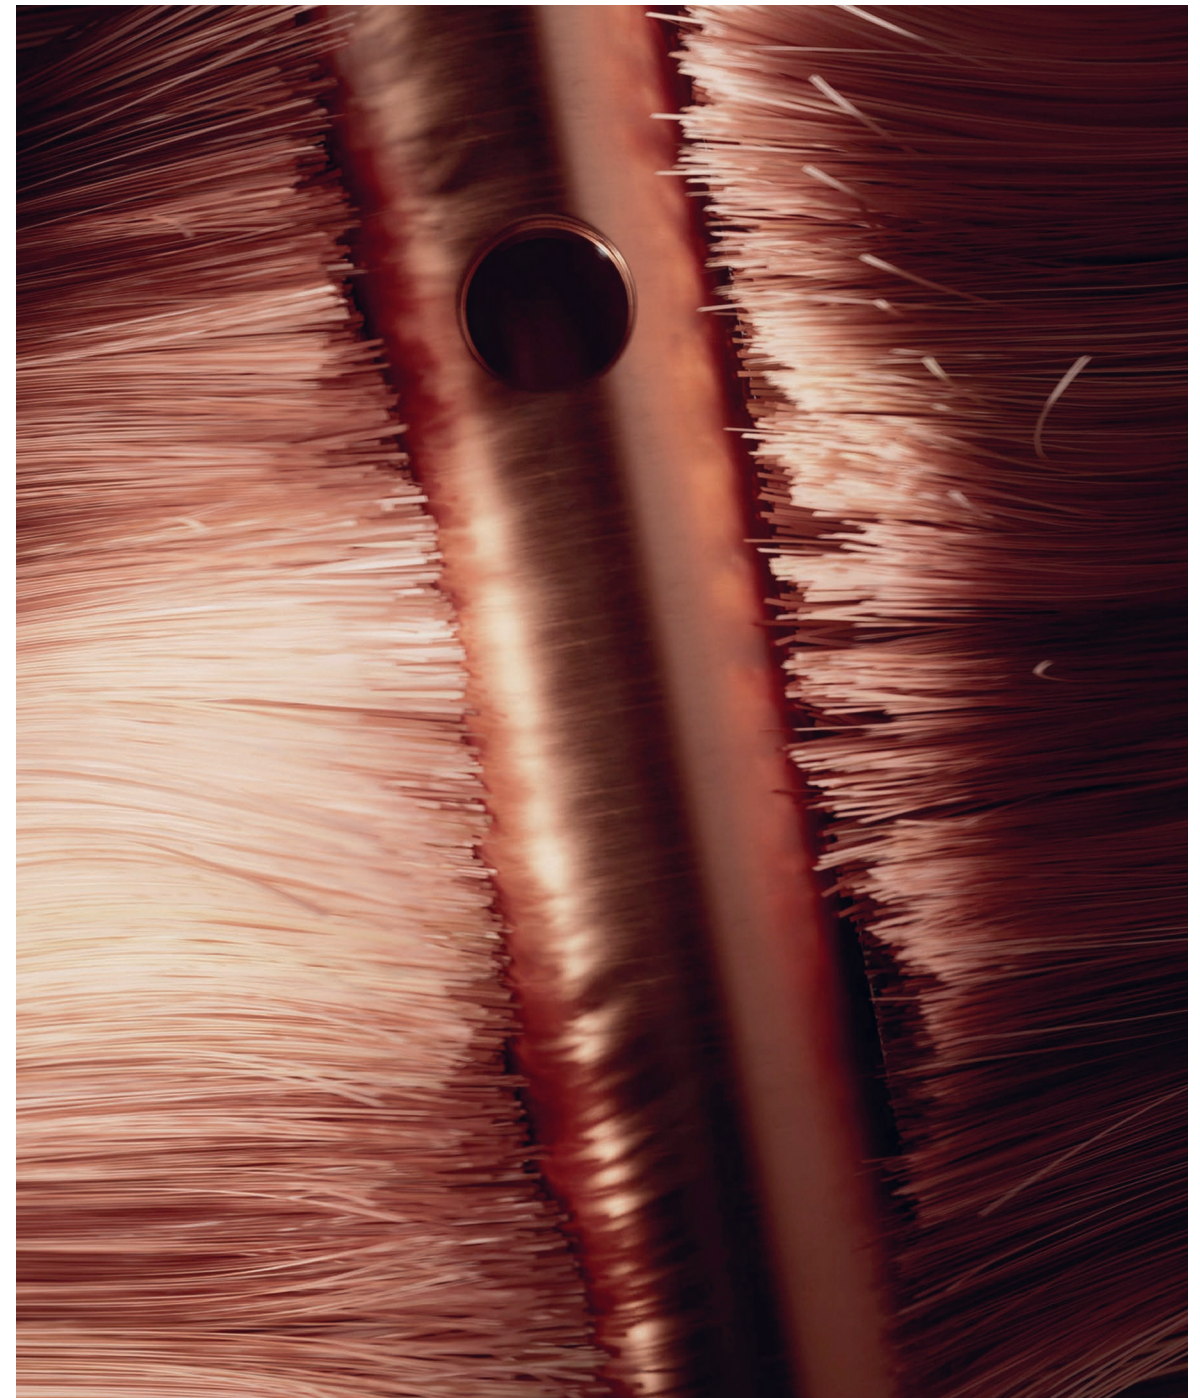

Shower heads are made using the **ANTI-SCALE** technology. Occasional tilting of the shower head, so that any stagnant water can be expelled through the nozzles, guarantees long-term performance.

EASY CLEAN aerators and silicone nozzles (implemented across shower heads and hand showers) allow the user to easily remove any limescale simply through wiping the silicone surface.

The advanced **PVD** technology, used to produce coatings on products in gold, brass, copper, and nickel colours, guarantees the highest possible durability and resistance to damage while facilitating cleaning.

Since 1990, we have been passionate about creating high-quality products and experiences – to empower others to live in inspiring, well-considered interiors.

We believe that our common responsibility is to strive for sustainable development. That is why we design consciously to minimise our environmental footprint across our products' life span and implement measures that help reduce water and energy consumption. Our products have won numerous design and innovation awards, including: Red Dot Design Award, German Design Award, Must Have award and Dobry Wzór award.
